

Updated Project Descriptions for Hyperface SDE Intern

Eco-Vision – Full Stack Waste Management & Sustainability Platform | Nov'25 – Dec'25

- Engineered a full-stack web platform that enables users to analyze waste materials and discover recycling, reuse, and sustainability opportunities through an interactive dashboard.
- Developed and integrated RESTful APIs using Node.js and Express.js for waste analysis, recommendation generation, user management, and analytics functionalities.
- Built responsive and interactive user interfaces using React.js, ensuring seamless user experience across desktop and mobile devices.
- Designed and optimized MongoDB database schemas for efficient storage and retrieval of waste records, user activities, and recommendation history.
- Integrated AI-powered recommendation services to generate contextual recycling suggestions, cost estimates, environmental impact insights, and waste-to-value opportunities.
- Followed modular architecture and reusable component design practices to improve application scalability, maintainability, and development efficiency.

Tech Stack: React.js, Node.js, Express.js, MongoDB, REST APIs, Generative AI, Git

Swasth AI – AI-Powered Health & Nutrition Recommender | Jun'25 – Jul'25

- Developed a full-stack MERN-based healthcare platform that delivers personalized health, nutrition, and wellness recommendations through an interactive dashboard.
- Designed and implemented RESTful APIs for user management, health data processing, recommendation generation, and progress tracking.
- Built responsive frontend interfaces using React.js and integrated backend services using Node.js and Express.js for seamless user interaction.
- Architected intelligent recommendation workflows to suggest meals, medicines, and preventive measures based on user health conditions and lifestyle data.
- Utilized MongoDB for efficient storage and retrieval of user profiles, health records, and recommendation history.
- Incorporated AI-driven analytics to monitor user progress and dynamically adapt recommendations for improved health outcomes.

Tech Stack: React.js, Node.js, Express.js, MongoDB, REST APIs, Generative AI
